## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 26-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chandrasekhar (WO 00/69525, IDS 11/25/05).

Chandrasekhar discloses a communication system (abstract).

Chandrasekhar does not disclose the communication system is wireless.

Chandrasekhar does disclose wireless communication systems are old in the art  
page 1, line 14.

It would therefore have been obvious to use a wireless communication system with Chandrasekhar's system, as it is well known as taught by Chandrasekhar, to use a wireless system for communicating data remotely.

Chandrasekhar further discloses a holder arranged to support a portable electronic device in at least two orientations abstract (holder could hold the PED in various orientations-claim does specify if functional in at least two orientations) .

Chandrasekhar discloses a communication device mounted to communicate with said portable electronic device positioned within said holder 110. Given the obviousness discussed above, it would have been obvious for the communication device to be wireless. It would further be obvious for said holder to be formed of a material that is

generally transparent to wireless signals and that is optically opaque for a wireless communication device to transmit.

Chandrasekhar discloses a transceiver that is disposed to one side of said holder fig.1b, a transceiver and said holder is disposed between said transceiver and a user of said exercise machine fig. 1a, a transceiver and said transceiver is remotely mounted next to said holder fig. 1b.

Chandrasekhar does not disclose the holder includes a generally cylindrical portion, however given no unexpected results it would have been obvious to use a cylindrical shape as opposed to Chandrasekhar's shape.

Chandrasekhar's discloses a recessed slot portion that intersect to effectively hold accessories fig. 1a, a personal data assistant abstract, said exercise machine comprises a treadmill fig. 1a.

### ***Response to Arguments***

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
